

Debco Plugger

Cell Tray Growing Media

Get off to a great start

Today's Modern Nurseries are looking for solutions that provide greater operational efficiency. Whilst this is important, quality of finished product is always of primary concern, and this is invariably determined by the condition and quality of propagation and / or plug stock.

In the quest to produce superior grade propagation stock, Debco considered a number of critical criteria in both design and manufacture of the growing media

- Components which are well composted to provide a stable and predictable medium.
- Specific particle grading and reintegration to provide a media that is consistent in particle size range for a variety of cell tray applications.
- Material handling characteristics suitable for cell tray systems, using machine filling and seeding equipment.
- Chemical and nutritional suitability for a broad range of species in a variety of cell volumes.
- The highest level of consistency to facilitate crop production.

Debco Plugger comes in five formulations, each made with Composted Pine Bark, Coir Fibre and mineral additives.

Through a unique process of particle separation and reintegration, each formula has a recombination matrix and set of nutritional parameters to suit various applications.

Debco Plugger

Cell Tray Growing Media

Plugger Product Range

Plugger 111 Base

Plugger Base 111 is an ideal substitute for peat in applications such as seed raising and propagation. This formulation contains SaturAid and micronutrients, and has been pH balanced.

Plugger 222 Starter

Plugger Starter 222 is a ready-to-use media for direct seeding of vegetable and flower seedlings. Ideal for micro cells and plug systems (2cc to 30cc volume). This formulation contains SaturAid and micro nutrients, and has been pH balanced.

Plugger 333 Starter Plus

Plugger Starter Plus 333 is a ready-to-use media for direct seeding of vegetable and flower seedlings. Ideal for small cell tray and plug systems (greater than 15 cc volume). This formulation contains controlled release fertilizer, SaturAid and micro nutrients, and has been pH balanced.

Plugger 444 Striker

Plugger Striker 444 is a ready-to-use media for direct seeding/striking of cuttings and general propagation in high volume cell trays. High nutritional phosphorus to suit fast gross feeding species. This formulation contains SaturAid and micro nutrients, and has been pH balanced.

Plugger 555 Striker Low P

Plugger Striker (Low P) 555 is a ready-to-use media for direct seeding /striking of cuttings and general purpose propagation in high volume cell trays. Low phosphorous formulation to suit Proteaceae species and other P sensitive species. This formulation contains SaturAid and micro nutrients, and has been pH balanced.

Plugger 666 Light Start

Plugger Light Start 666 is a ready-to-use media for direct seeding of vegetable and flower seedlings. Ideal for micro cells and plug systems (2cc to 30cc volume). This formulation contains SaturAid and micro nutrients, and has been pH balanced.
